

How much could "high-efficiency air conditioning" save me?

Considerable! Most equipment installed in the 1980's had an S.E.E.R. of between 6.0 and 9.0. Today the minimum S.E.E.R. is 13.0 and goes up to 17.0. Many times we remove older air conditioning equipment and replace it with new high-efficiency equipment, and the owner gets 30% to 50% return on investment.
